

The rendering qualities of a home theater system also depend on the properties of the cable used. Just the data-rich and complex signals via HDMI can lose significantly to quality bad cables and contacts. The Italian cable specialist HiDiamond has developed its cable itself and leave nothing to chance of far East production. Among the "Big" comes VRC 4 copper for the inner conductor to the usage that was boiled and is thus super clean four times under different temperatures in contrast to the most other types of copper.

A special XLPE-(cross-linked-Polyethylen) coating wraps conductors without air inclusions.

The solid outer jacket is protected by a resistant nylon fabric. The metal connectors with gold-plated contacts are also very firmly attached to the cable with an extra knuckle protection.

## Brand: **HiDiamond** Model : **HDMI Big**

Categories: **HDMI-Cable Highspeed with Ethernet**

Price	ab 100 Euro/1m
Distributer	Beta Audio, Unna

**TOP CLASS**  
**HEIMKINO**

Test : **617-2013**  
**Uberragend** **1,0**

**Conclusion:** The technical effort for the "Big" has paid off, because this HDMI cable transports absolutely without loss of picture and sound signals from A to B.

With this shielding outer interferences have no chance to disturb any signal.
