Interconnection HiDiamond 3 Diamond and Diamond Power 2

October 29, 2014, Wednesday 10:07:26 Europe / Budapest

Everyone deserves a little 'shine

A new Italian company was started in November 2000, he sold the cables and hi-fi all over the world. Today, the core business are the cables for hi-fi and electronics for high-quality network. The company HiDiamond, is located in the town of Anzio. The city is historically known as the place where the Allies landed during the Second World War. Were shot several films and written several books.

The HiDiamond not a Do it yourself cable manufacturer that produces the wire in a garage for rental, not a marketing company sci-fi. Their production and developments are surprisingly high.

Dr. Salvatore Filippelli HiDiamond founder and CEO, created the largest production company in audio and video cables Italian. A new reality shines, reaching product is technically original manufacturing. Previously, he was executive director of the company Nextream, which is owned by Thomson Electronics Group. The right hand of Julian Pompili tremendous experience in the telecommunications and aerospace engineer who has worked for global companies such as Selex Marconi Industries and Boeing. The development senior engineer George Santinelli, who heads the research team of the raw materials and the designer.

First-class materials and with the most advanced Equipment, HiDiamond is committed to providing the highest level of production, the novelty of design and quality control. Depending on the model you mention, copper, graphite. For detailed technical information, as well as the "construction process" can be found on the website HiDiamond. The most important physical tests performed in the laboratory and the tensile strength of the materials, toxic and subjected to electrical tests. Verification of the indicators of rigidity, impedance and dielectric capacity make the transfer impedance, resistance, speed, and other small studies. Not many manufacturers are able to perform such a complex control lines and a plurality of measurements.

The first visual impression. It is a cable fantasy. The workmanship is fabulous. Glamorous, even sexy. This cable looks like a million bucks. The packaging? Excellent. The cable is located in a box wrapped in silk. So the first impression Woww! The Italians know how to plan things so that they are visually appealing, experience designer for any of the cars, and, of course, for cables and speaker.

We tested the D3 interconnect cable that has a high purity copper. The copper in the patent "4VRC © Technology" is processed to reduce the inductance, resistance and capacitance, thereby improving the linearity of the signal transmission. E 'treated copper material at high temperature - in contrast with most of the manufacturers only double heat. HiDiamond is your own cables to 4 times copper . This is achieved by a special heat treatment to nearly 100% pure material. All related activities (eg .: The development of the spiral geometry) mechanical work is done.  
hidiamond cable test

The No. 3 connecting cable XLPE insulation 100 times better than standard PTFE. This reduces the contact surface signal flow created obstacles to greater linearity and low-amplitude signals to provide natural energy. All solder the cable connections are made which contain at least 4.2% silver. Quality plugs made.

External diameter: 8 mm

The number of blood vessels leading 2

Blood vessels leading material: copper (4VRC)

Capacity: Max. 120Pf / m

Impedance: 6 Ohm / 100 m

Insulation impedance: 2 Ohm / 100 m

Weight: 4 Kg

Distributor: Stream Audio Ltd.

Natural sound with excellent bass extension, sounds natural, non-aggressive, non-intrusive, transparent sound stage, image features extensive.

The power cable D2. This cable is a class apart in terms of physical size - great game for the big boys. This means that the cable is thicker than average, requires the space behind. This cable is required at least 50 inches of space behind the rack. The cable should work at least 200 hours of run-time status.

## Cable test HiDiamond

Outside diameter: 10 mm

The number of blood vessels leading 2

Blood vessels leading material: copper (4VRC)

Capacity: Max. 120Pf / m

Impedance: 4.95 Ohm / 100 m

Insulation impedance: 2 Ohm / 100 m

Weight: 4 Kg

Distributor: Stream Audio Ltd.

This cable provides a clear and detailed sound, and never aggressive or subtle. Fresh, exciting, fast, consistent and coherent, precise, dynamic and neutral. This cable allows the information to be fully expressive without false coloration. All uncertainty disappears. This cable does not absorb the information and does not alter the tonal character. Without lifting, precise and neutral, balanced sound in any part of the spectrum. I think this is the best speaker cable in this price range. This cable is cheap, there is no need to rob the bank! This cable has a low cost compared to how it looks and sounds great.

### conclusion

I think there are very few perfect audio equipment. You can always find a space smaller or larger. No matter how hard I tried to find it, whatever it may be related, and I could not find any fault with the sound. I would recommend the purchase of these cables that have humanly very affordable prices. Although this is not the perfect route audio nirvana - especially if you have to pay much more to get better perfection - I think these cables sound good to explore new boundaries.
