

HiDiamond HDX2 Power Distributor high-end

For those of you who care about their devices, today we test the HDX2 Power distributor. We declare first that is of good quality and that in addition to the usefulness aurally has an overcurrent protection.

The HDX2 is one of the serious candidates for a podium place if there was a beauty contest, compared to traditional competitors. In fact, it uses a sophisticated wave front due to the refraction of the dark silver-colored front panel, an LCD display blue, which shows the value of the mains voltage and current. The device has five plugs arranged in a row

on the rear panel.

Inside, the unit completely wired in a star with the owner HiDiamond 4VRC copper wires, which takes care of the device's power supply system. Uses a 230V / 60A filter with double shielding and provides a highly efficient filtration without affecting the sound quality in other undesirable ways. The device has a protection against harmful surges of Siemens. The device is capable of transmitting a maximum of 2300 watts of power, so that you never have to worry about the load capacity in the case in which more powerful power amplifiers are connected.

Audio Considerations:

The audio system powered by 'HDX2 is smoother, more cultured, more detailed and a little' more airy and, interestingly, at the same time, more enjoyable and more real. The dynamic level is maintained, but the bass drum, in addition to their precision is slightly softer. The small noise edges that previously had heard disappear and the sound becomes true, that in each case refers to the reduction of the distortions. The clarinet is technically good, it develops in a few minutes, the music is more mature, more developed, more beautiful and his voice has more colors and shades, but freed harmoniously integrated with the rhythm section. In the analog world you perceive the quality and beauty of sound vibrations with more body, the sound will be harmonious, rich and beautiful.

The hand drums, the bare skin of the palms are played really and are more credible. Even the woofer can be kept at bay with a reserve of energy better. They are more precise and resonances are profound.

Shirley Horn with the atmosphere is a bit 'more peaceful and pleasant, the singing tone is soft, the sound has breath, "easier", but not flat. The size is slightly larger, the singer, has meanwhile become the central player. The shooting environment gives a background rich with stronger will, and with it, of course, the resolution and the level of detail increases. When we hear the Vivaldi with a low-cost power distributor and then insert the HDX2 we get a definite softness with new dynamic elements, significantly increases our emotional line which makes the level of music very ideal. The violins play smoother, more complete, more colorful, rich and pleasant, the music comes out the winner.

With inclusion of 'HDX2, regardless of genre of music, everything will become more even, really take care to sound and in any case gives me the feeling, as if some of our component was replaced with a new higher quality.

Analogously with what happens with the expensive network cables, the result is a complex improvement with HDX2. The sound image will appear as if the system were changed. Thanks to the five slots of the device is sufficient for a complete hi-fi or home theater, also it protects connected devices.
