HiDiamond cable interconnect and speaker cable Diamond Series 7

## Diamonds are forever

Some cable manufacturers have called their company as its founder, other companies prefer to give a fancy name like HiDiamond, the road traveled in this case by its Italian creator, founded in 2000 by a Dr. Salvatore Filippelli. Dr. Filippelli was general manager of Nextream a subsidiary of the French group Thomson and wanted with HiDiamond, realize his vision of excellent products and design.

HiDiamond became the largest Italian producer in Europe for the cables for audio and video. So it's not a newcomer, but a well established company.

its products have already found in the specialized press in many countries a positive response. Recently, the German company Bellevue has taken over the distribution of HiDiamond for Germany, Austria and Switzerland. Today we will try an interconnect cable RCA number 7, as well as a cable for HiDiamond speakers 7. They will keep the promise of products in the name of self-confident business?

### Outside with elegance, inside full of Hi-Tech

We deal primarily of technology, cable and inside the HiDiamond 7 the company has developed and patented the '4VRC'-Technologie. Normally the competition uses annealed copper as the conductive material, in this case using the '4VRC' - Technologie - as the name already indicates - the copper and for 4 times cooked. The Molecular network through four rounds at different temperatures with an annealing process. The higher purity of the base material, thus formed is a key factor for the quality of the cable. The greater the degree of purity of the copper so as to have smaller cross sections with lower resistance and low fragility - both with fairness associations, which allow a perfect calibration. It is used as the dielectric XLPE, is this material is more suitable according HiDiamond compared to Teflon. It all leads to achieve benefits that include among other things, a higher signal transmission speed, the lower cable capacitance, as well as a greater mechanical stability. Italians pay particular attention to the inner and outer sheath of the cable HiDiamond 7, using graphite, to neutralize the noise to speak.

The contact surfaces of the cinch / RCA plugs and the speaker cables with banana plug are coated with rhodium. On its HiDiamond suppliers he does not write more details - a shame, because the plugs do a very good mechanical pressure. The cinch / RCA plugs should be screwed into the socket to hold and the banana is foolproof, however, they have a device that spreads the plug into the terminal and speaker sets

contact. It further appears necessary, because with a diameter of almost two centimeters HiDiamond 7 raggiunge major proportions!

### What brings the signal cable HiDiamond 7?

Enough with the theory. Now I want to hear! The cable HiDiamond 7 RCA has been inserted between the D / A CEC DA5 and my integrated amplifier Symphonic Line RG 14 Edition. a similarly priced cable replaced. Listening with both speakers with headphones and Immediately I was a bit 'surprised, because I got so much more resolution, fluid dynamics, a natural stream music that I had not expected I honestly -.

I put on a favorite CD, the Brazilian jazz singer Ana Caram and friend of Antonio Carlos Jobim dedicated (Ana Caram, Bossa Nova, CD / records Chesky JD129). In the fourth song, she sings the popular song, - "The Girl from Ipanema". As soon as the drummer Duduka Fonseca performs the movement of the brushes on the leather head of the snare drum, **I feel clearly and vividly as never heard before** compared to my usual configuration of the system. In the next track "Agua de Beber" - a known composition of Jobim - where he plays the guitar Romero Lubambo,. Now, I look forward to the title "Olha Pro Céu", which is for me personally, how important is this music and is able to touch me deeply. The representation is now sculptural and fascinating. The guitar is bright and shiny, and I noticed clearly heard the sounds on the saxophone blowing.

Rest on jazz and Brazil.

Recording technical Berniem Grundman - known for its excellent mastering -1987 he worked with the legend of jazz Sarah Vaughan, singer and Brazilian composer Milton Nascimento and Paulinho da Costa, Hubert laws and George Duke (Sarah Vaughan Brazilian romance, Blu-spec CD / Sony Music Japan International SICP national 20117).

This recording and the challenge of complexity for the reproduction chain. In one song, "Make this city ours tonight" and Song 2, 'Romance', where we have a large group of music and at the same time the piano. When it stops must clearly out of Sarah Vaughan characteristic voice that must dominate everything. I know from experience that such records depending on the equipment and cable connections you lose something for the road. Here it is not the case. Another example: in the 5 song "Photograph" has remained in my memory the delicate hidden harp playing. **Now is audible!**

### What we get with the combination of the signal cable 7 HiDiamond and cable for speakers HiDiamond 7?

What will the union between HiDiamond 7 RCA and HiDiamond 7 Speaker, with respect to my proven coupled silver / copper ?. To have a basic phonetic comparison, still I start with Ana Caram and Sarah Vaughan. Everything seems even stronger in the same direction which is heard after the replacement of only the signal cable. The sound image is further increasing transparency, but without that in some form becomes overly analytical. The dynamic is more increased, as when playing the Concerto for Piano and Orchestra in G major by Maurice Ravel (Ravel / Faure, Daniel Varsano / Philharmonia Orchestra, CD / Pro Arte CDD313) and as in the song in 1932, which possesses powerful savage attacks alternating in rapid succession. **"Much more emotion is transported and the stage is huge"**

Now listen to a sample, a reference in the records under the title "Reference Jazz, Etc." (RR-S2CD)! The solo electric guitar in the title "Tropic Affair" they remain in memory, so vividly and cloying. On the other hand even the most beautiful movements with jazz brushes are made of course. Black during the breaks of the music you hear?

**Yes, these two HiDiamond 7 cables make the show**, bring more peace on the image of the sound.

### What does alone the cable for speakers HiDiamond 7?fa da solo il cavo per altoparlanti HiDiamond 7?

But how are the HiDiamond 7 speaker cables connected to yourself?

-And The low range? To find out, I put an LP on the "John Handy" -Plattenspieler from house Pear Audio Blue, The saxophonist Cannonball Adderley played music together with pianist Bill Evans and other good friends (what I mean, LP / milestone M 47053). The sound is full and round. In "Nancy" song, the room size takes almost holographic. The drum is strong, full. The piano and the saxophone form an interesting contrast. Now, I could understand and feel that my music collection has found the right direction, which speaks for the Italian cable. **Feeling better, I did not believe in HiDiamond 7 cables is the signal that speaker did "move" so the plant. Very quickly I realized that diamonds are forever ...**

### Final considerations

---

The Italian products are connected to the elegance, fashionable, and certainly not wrong. Even better if under the costume, we have an innovative technology and the result meets the high demands that we want. These cables HiDiamond 7 RCA and HiDiamond 7 speaker line up to medium high end of the Italian manufacturer's catalog and the average price but instead are high class products. You must listen to my recommendation are given away, sure to listen!

### Information

HiDiamond NF-Kabel Diamond 7 mit RCA/  
Cinch-Steckern, 2 x 1 m

Preis: 799 Euro

HiDiamond Lautsprecherkabel Diamond 7  
mit Bananensteckern, 2 x 3 m

Preis: 1.399 Euro
